

CSS align-self Property

Reference

Example

Center the alignments for one of the items inside a flexible element:

```
#myBlueDiv {  
  align-self: center;  
}
```

[Try it Yourself »](#)

More "Try it Yourself" examples below.

Definition and Usage

The `align-self` property specifies the alignment in the block direction for the selected item inside a flexbox or grid container.

For pages in English, block direction is downward and inline direction is left to right.

Tip: To align a grid item in the inline direction instead of the block direction, use `justify-self` or `justify-items` properties.

Note: The `align-self` property overrides the grid or flexible container's `align-items` property.

CSS

JAVASCRIPT

**Default value:** auto**Inherited:** no**Animatable:** no. [Read about animatable](#)**Version:** CSS3**JavaScript syntax:** `object.style.alignSelf="center"`

Try it

Browser Support

The numbers in the table specify the first browser version that fully supports the property.

Property					
align-self	57.0	16.0	52.0	10.1	44.0

CSS Syntax

```
align-self: auto|stretch|center|flex-start|flex-end|baseline|initial|inherit;
```

Property Values

Value	Description	Play it
auto	Default. The element inherits its parent container's align-items property, or "stretch" if it has no parent container	Demo >
stretch	The element is positioned to fit the container	Demo >
center	The element is positioned at the center of the container	Demo >

HTML

CSS

JAVASCRIPT

baseline

The element is positioned at the baseline of the container

Demo >

initial

Sets this property to its default value. [Read about *initial*](#)

inherit

Inherits this property from its parent element. [Read about *inherit*](#)

More Examples

align-self in grid layout

Set alignment at the end in the block direction for a single grid item with the align-self property:

```
#container {  
  display: grid;  
}  
  
#myDiv {  
  align-self: end;  
}
```
