Text Colors

Bootstrap 5 has some contextual classes that can be used to provide "meaning through colors".

The classes for text colors are: `.text-muted`, `.text-primary`, `.text-success`, `.text-info`, `.text-warning`, `.text-danger`, `.text-secondary`, `.text-white`, `.text-dark`, `.text-body` (default body color/often black) and `.text-light`:

Example

This text is muted.

This text is important.

This text indicates success.

This text represents some information.

This text represents a warning.

This text represents danger.

Secondary text.

Dark grey text.

Body text.

Light grey text.

Try it Yourself »

You can also add 50% opacity for black or white text with the `.text-black-50` or `.text-white-50` classes:

Example

Black text with 50% opacity on white background

White text with 50% opacity on black background

Try it Yourself »

Background Colors

The classes for background colors are: `.bg-primary`, `.bg-success`, `.bg-info`, `.bg-warning`, `.bg-danger`, `.bg-secondary`, `.bg-dark` and `.bg-light`.

Example

Try it Yourself »

The `.bg-color` classes above does not work well with text, or atleast then you have to specify a proper `.text-color` class to get the right text color for each background.

However, you can use the `.text-bg-color` classes and Bootstrap will automatically handle the appropriate text color for each background color:

Example

This text is important.

This text indicates success.

This text represents some information.

This text represents a warning.

This text represents danger.

Secondary background color.

Dark grey background color.

Light grey background color.

Try it Yourself »
